

# Mobile Workbench v2 - Imperial cut list

## Assembled views

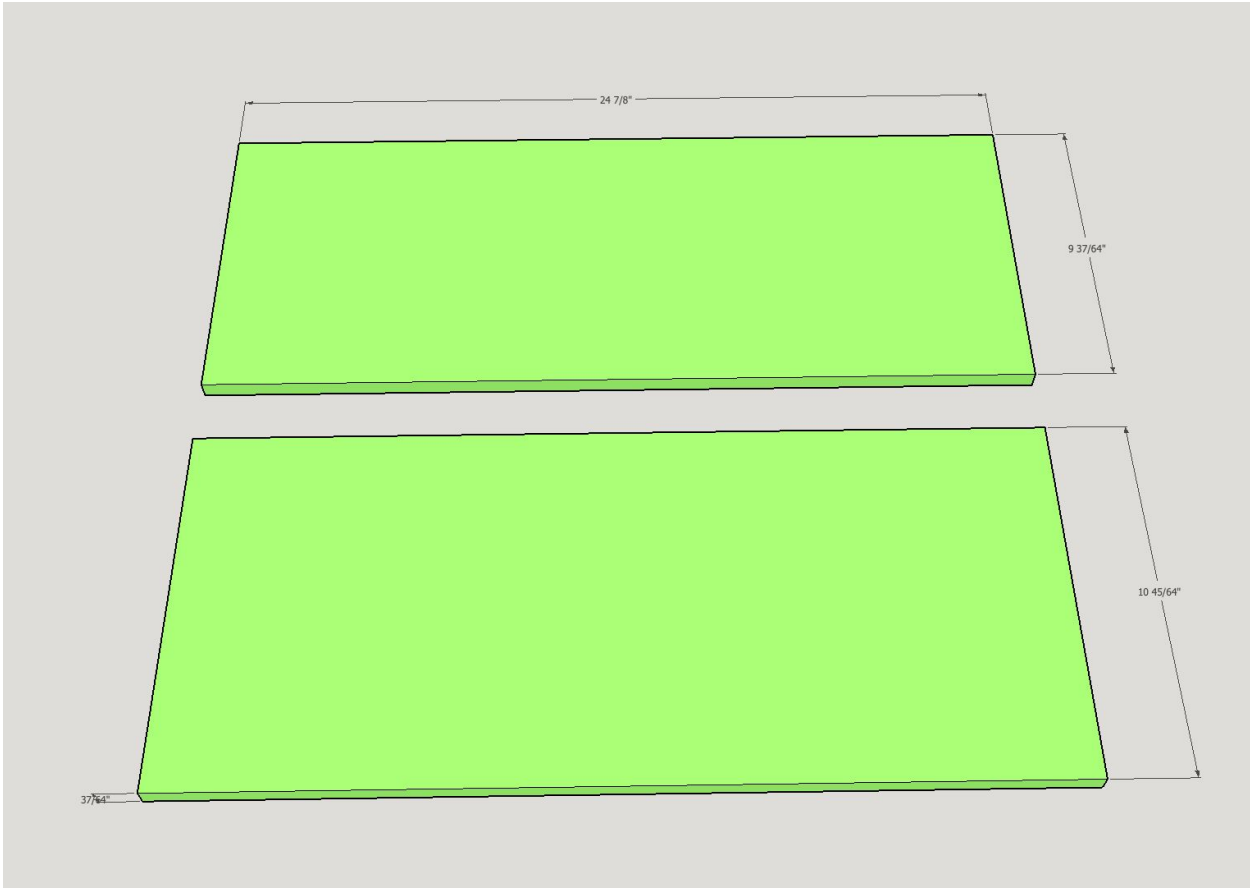

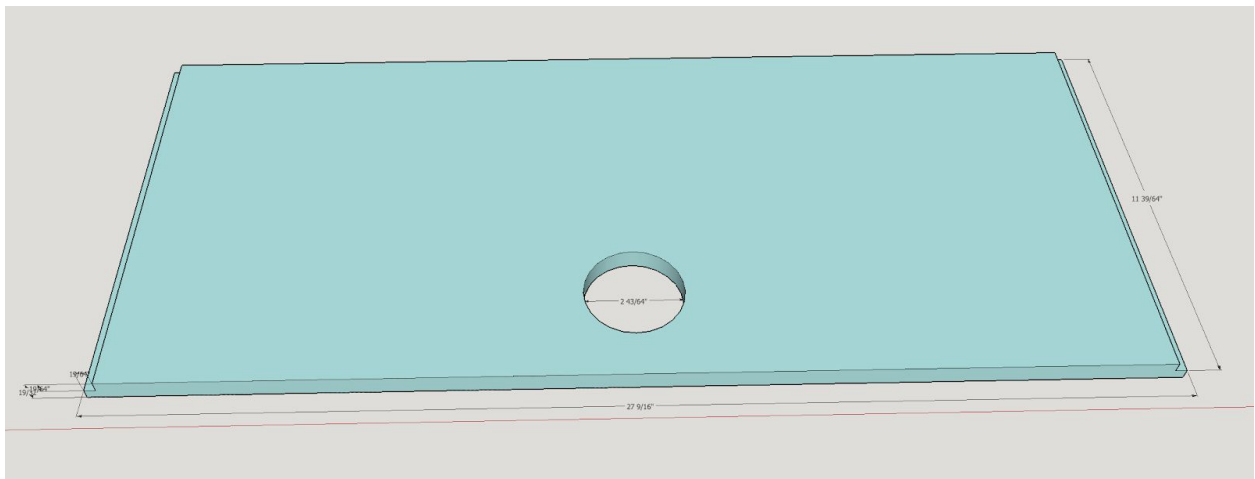

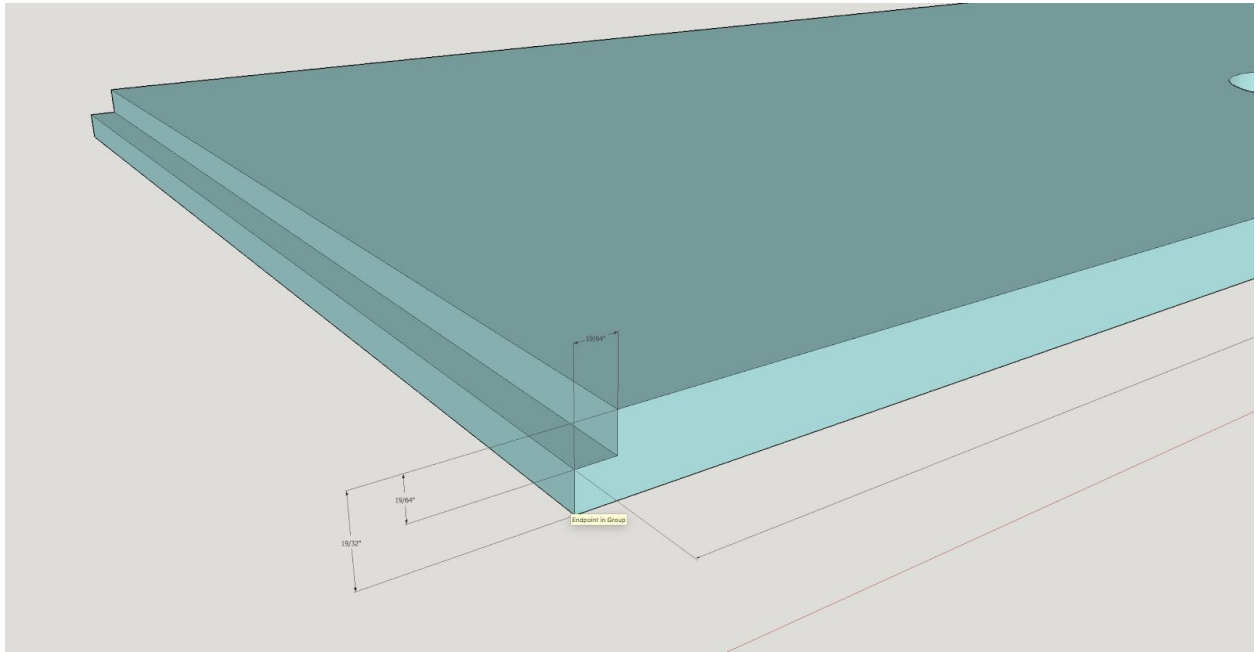

This version of the dimensions does not include the slide-out saw. If you want to build that take it into consideration when assembling.

I added an additional support in the middle to rest the runners on. Also the front horizontal support that's underneath the front of the saw will need notches for the runners.

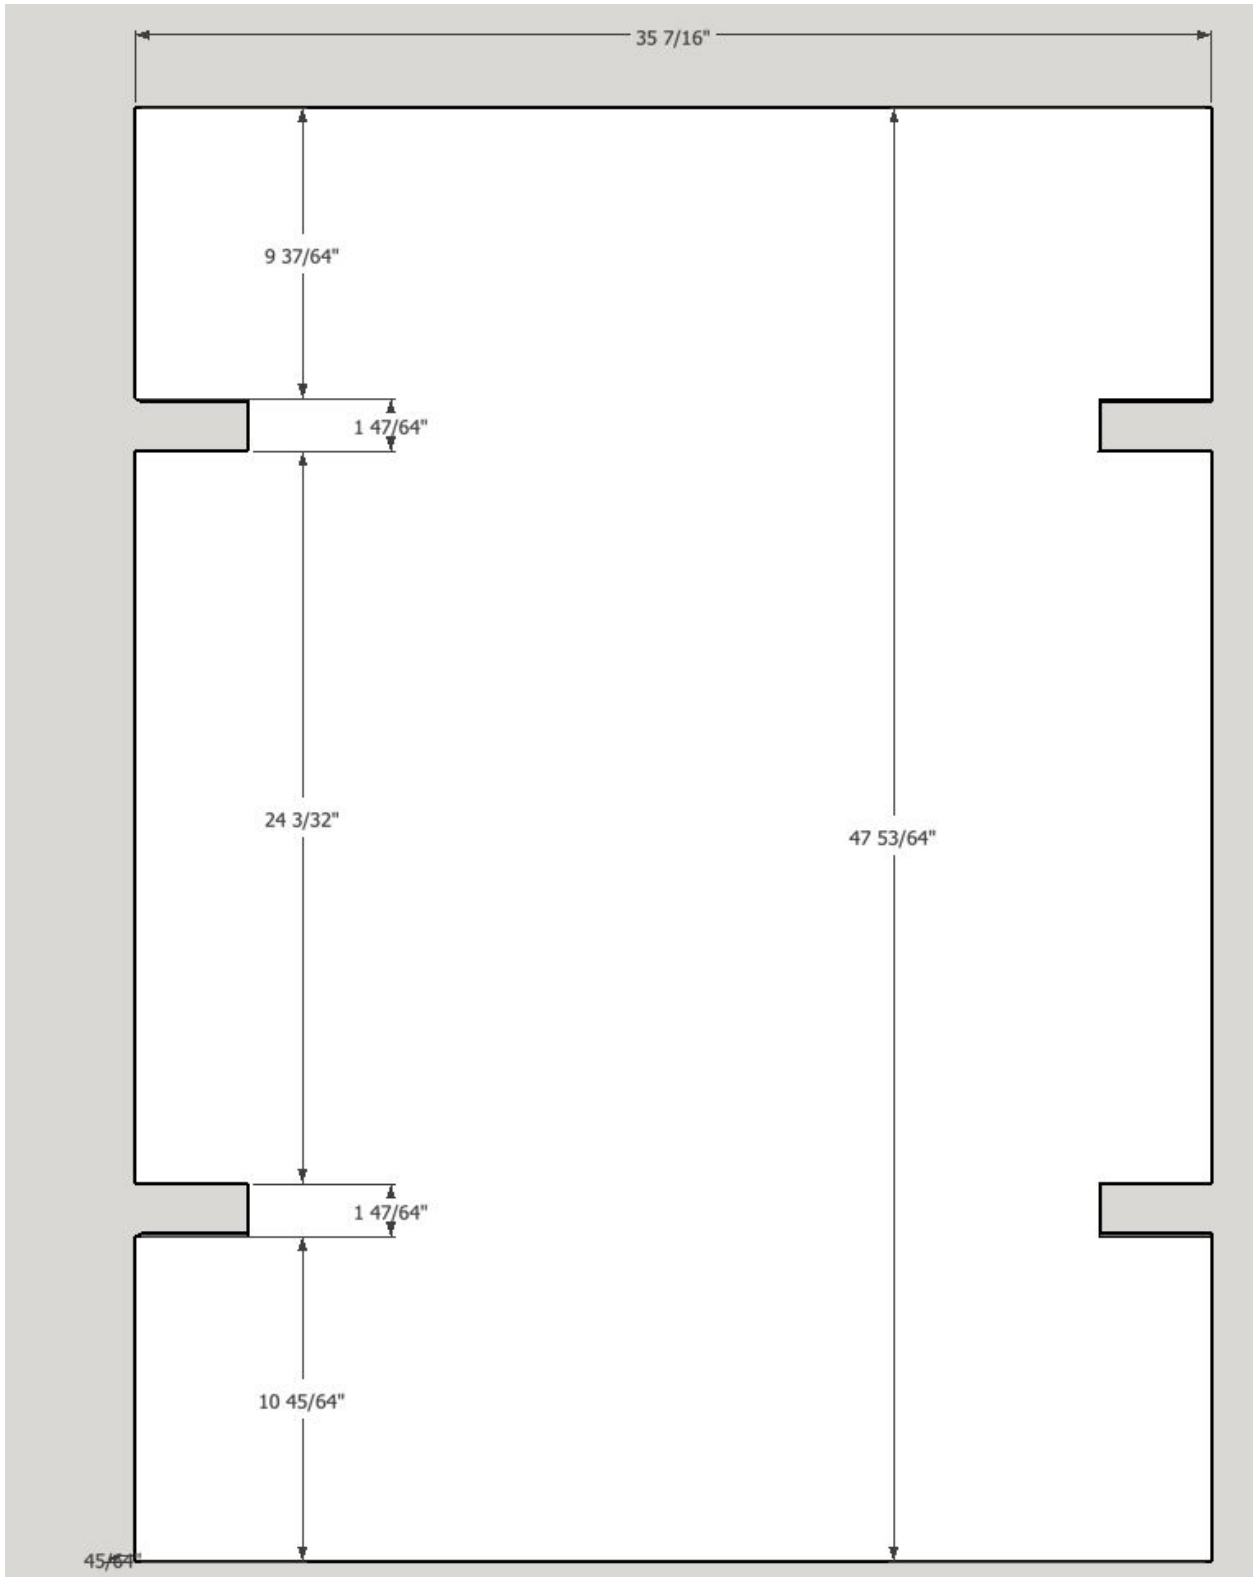

# Parts

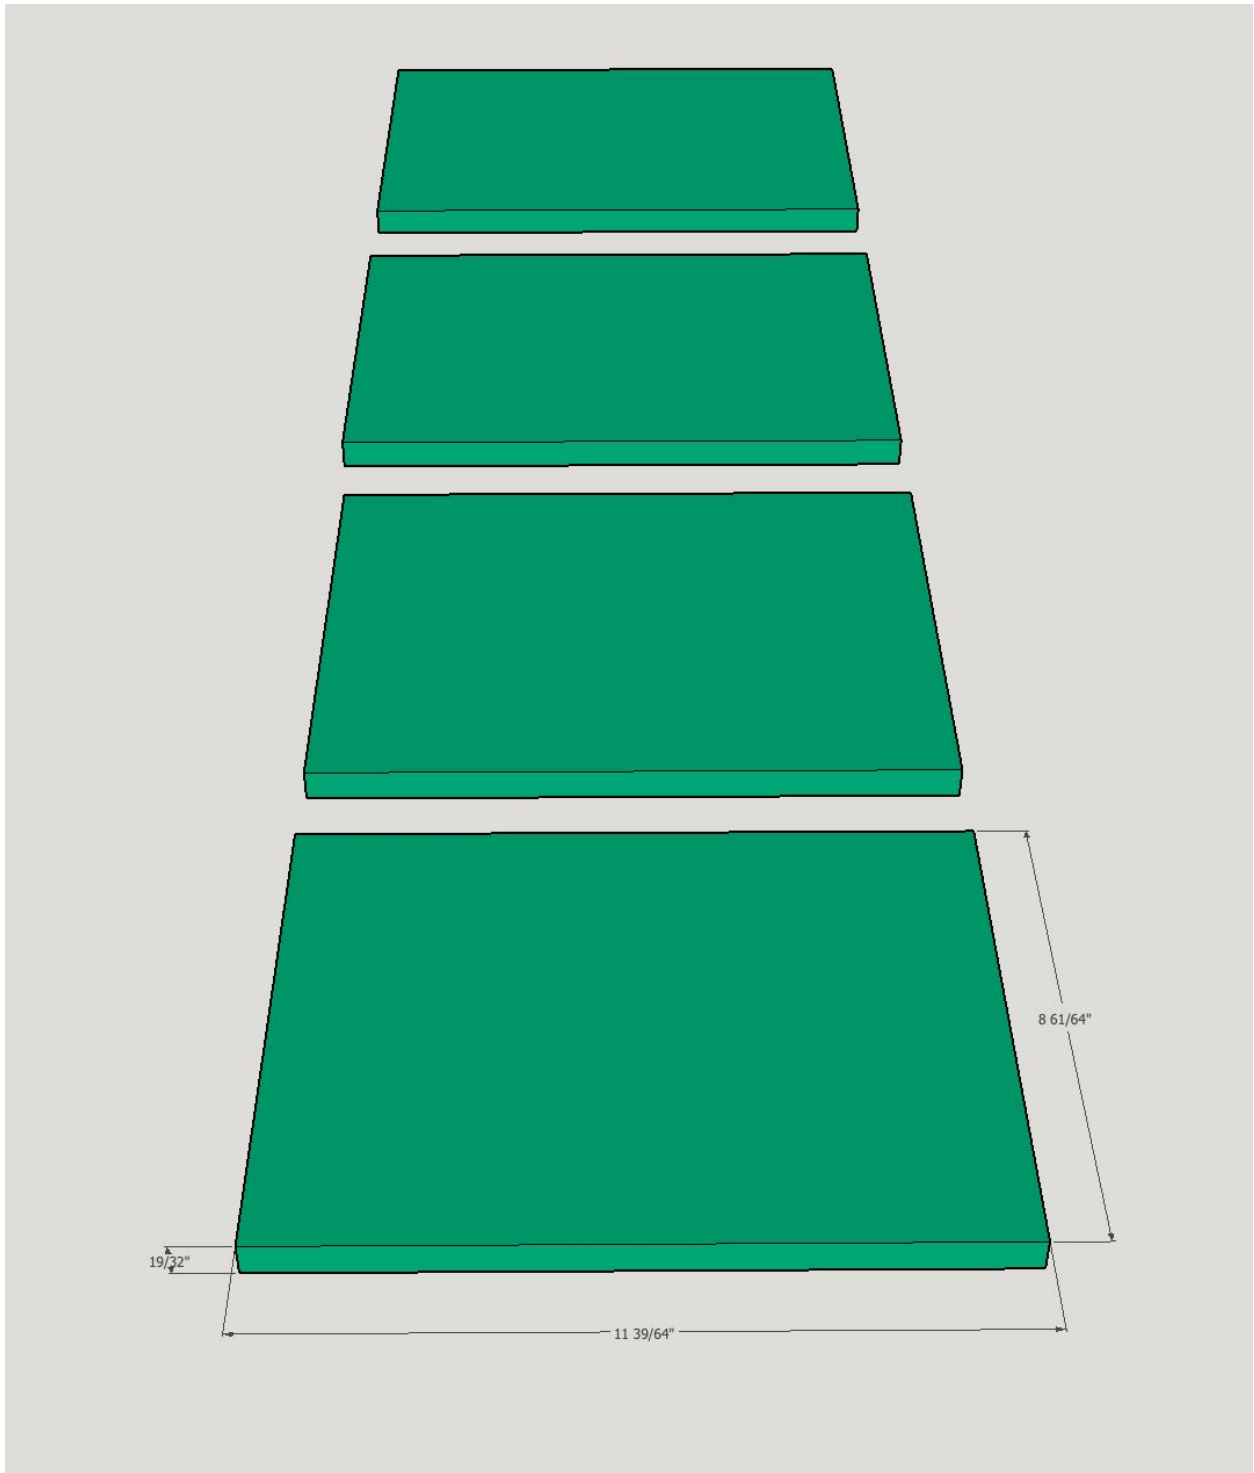

Tops of side cabinets

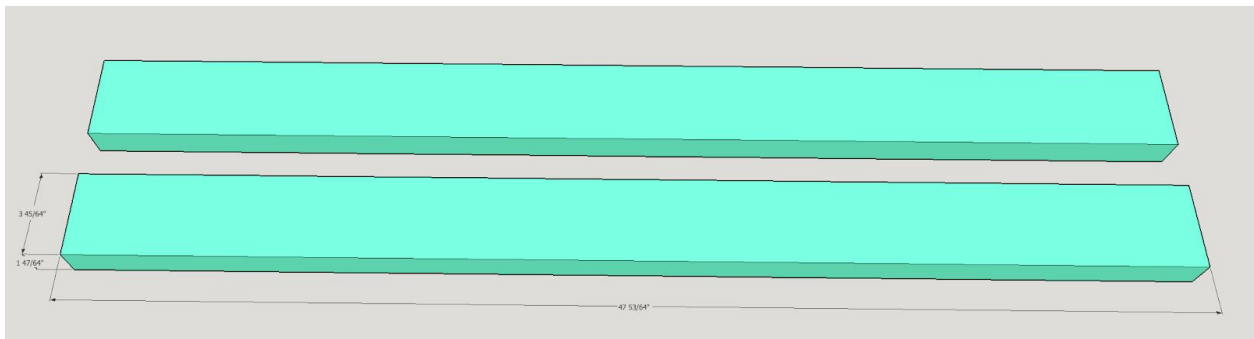

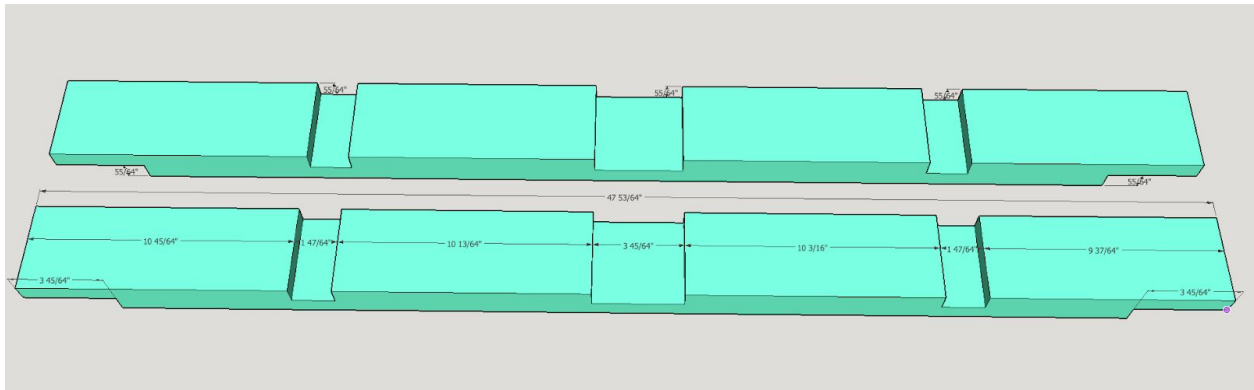

Back of back cabinet with hole for dust collection (make this larger if you want your saw to tilt)

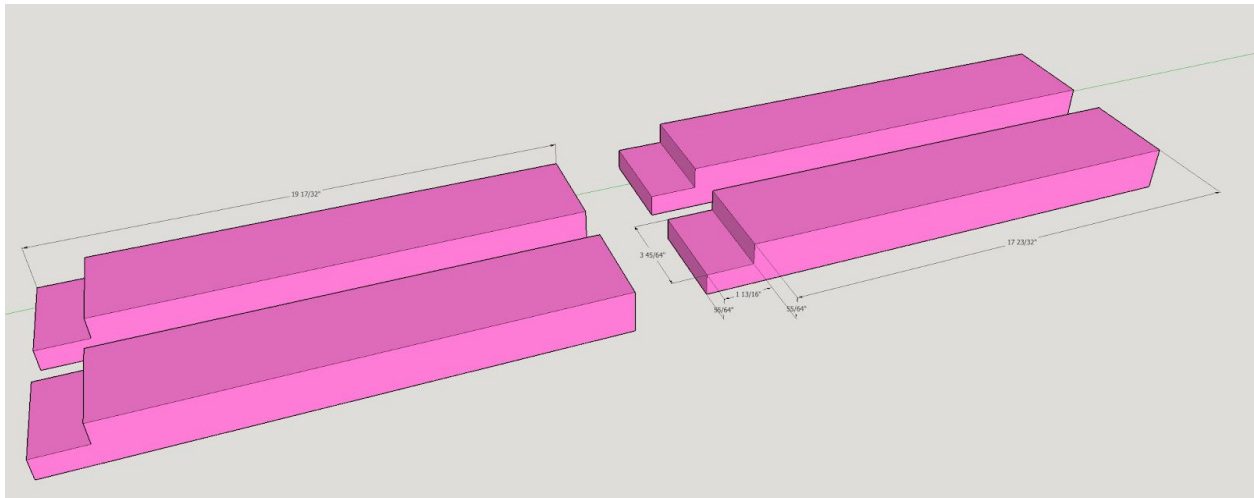

Bottom piece that goes on the lower frame. Holes are cut-outs for the frame.

Dividers for back cabinet.

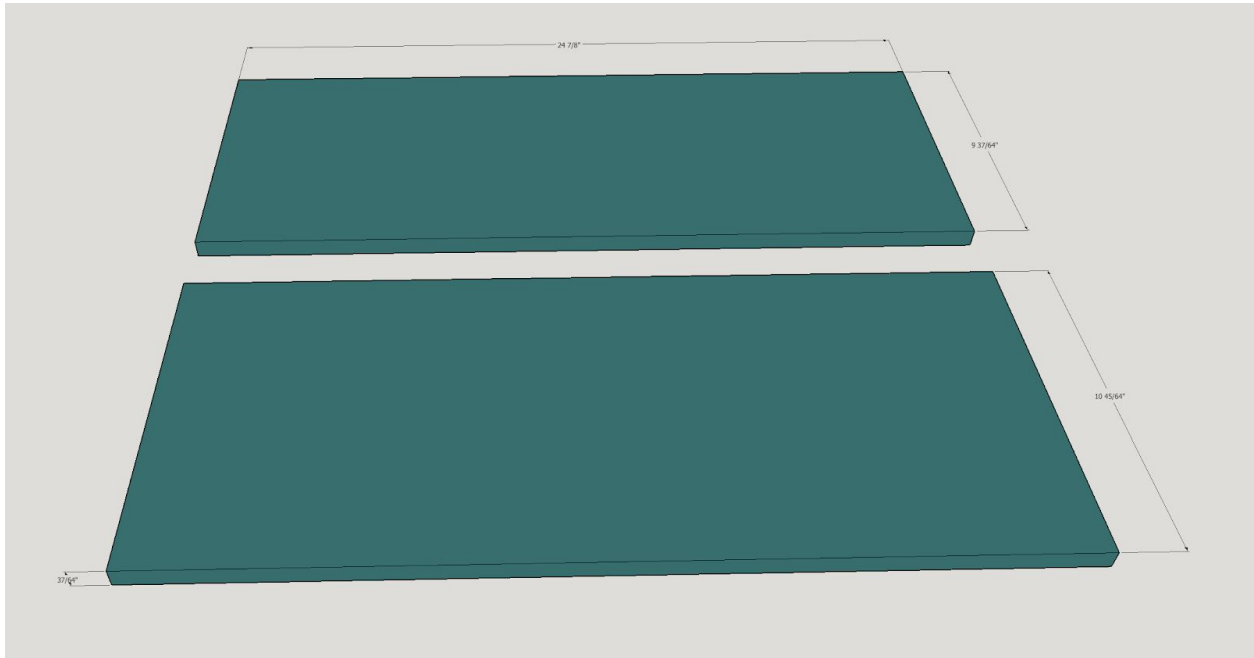

Frame pieces (check where your half lapse joints are for the notches).

Uprights for the frame.

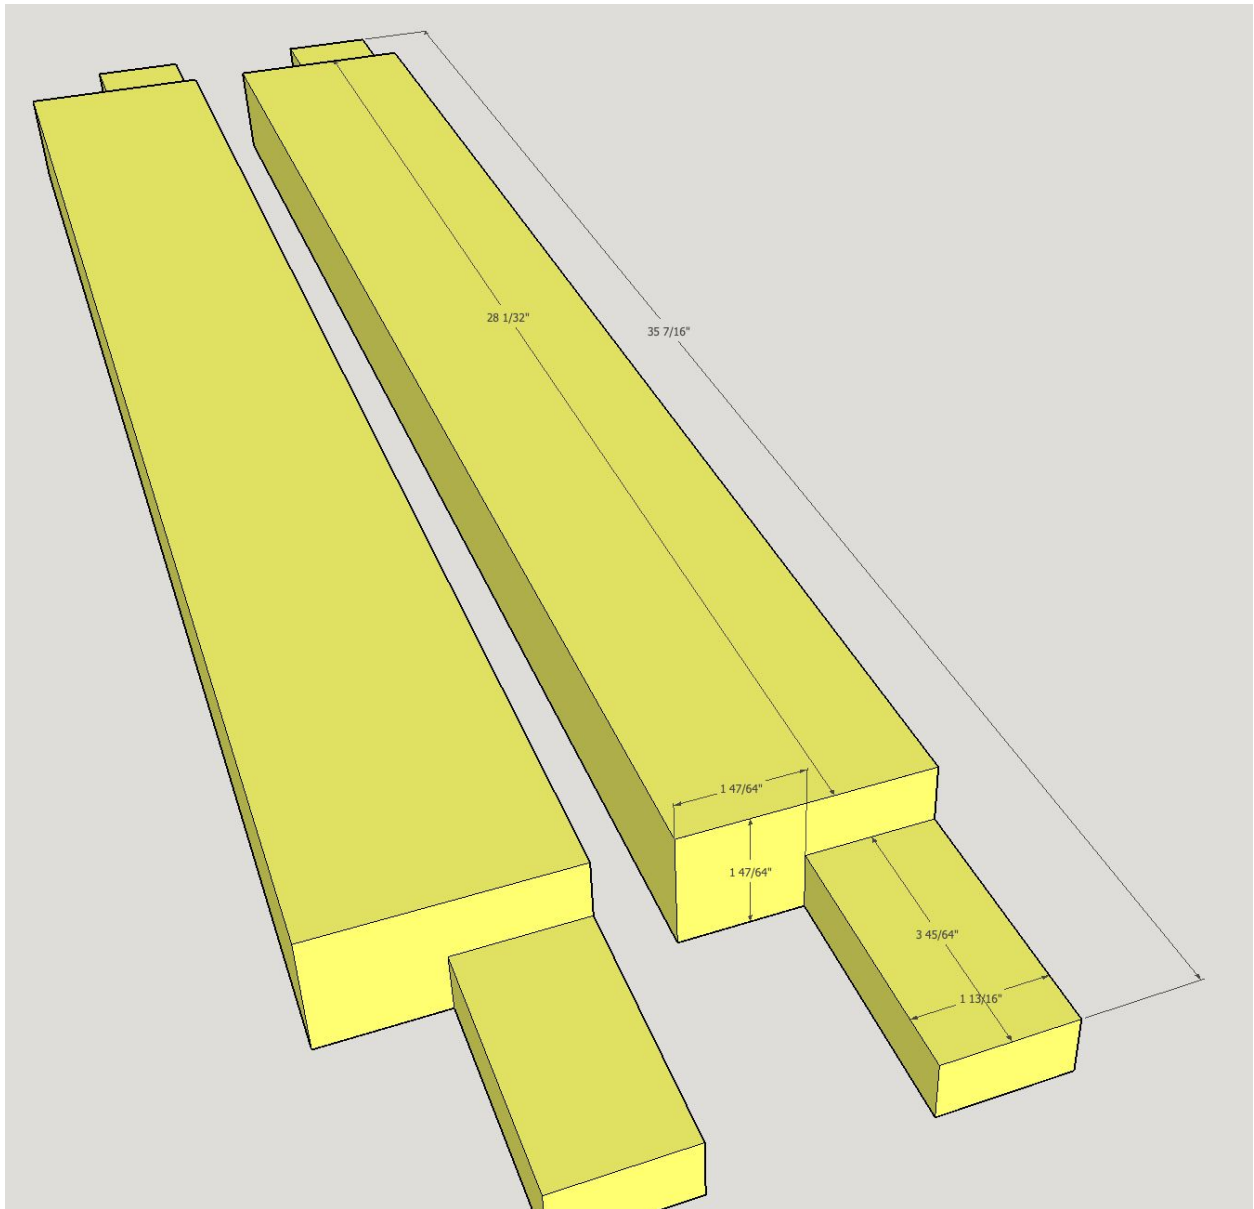

Bottoms for the side cabinets.

Bottom for back cabinet.

Top for back cabinet (this will need cutouts for the T-tracks if you use those).

Pieces of the frame that lay horizontal on the uprights.
